Quantity Sold vs. Returns by Region

Chart | Map

Key Alert

SW region faces greater challenge in retaining existing customers vs. LY, especially in Los Angeles district with 4.16% YoY dropped in 2025 Qtr 4.

Even Sales Boost event in Nov25 didn't help, Sales dropped 21.62% and Customers decreased by 17.97% in Dec 25 while Return Rate increased by 20.11%. Might need more info (e.g. the reason of return) to investigate deeply whether customers left in SW region was caused by increased rate of products returned, otherwise Sales is expected to decrease continuously until Mar26.

Key Insights

Sales in USA decreased by 6.25% MoM in Dec25, while increased by 8.63% YoY. The MoM growth rate was highly diluted by Nov25 Sales event (↑44.55% MoM while ↑23.72% YoY). On the other hand, it might also shows Nov25 Sales boost didn't bring continuous sales growth.

Return Rate increased by 6.96% in 2025 Qtr 4 vs. Qtr 3, might be casued by 10.81% increased on quantity sold. (Incl. Mexico and Canada West regions)

Average Order Value increased by 16.71% in Dec 25 vs SMLY. While it was diluted by temporarily reactivated customers LM, it increased by 2.05% in Dec25.

Key Insights

Sales boost event in Nov25 has attracted 16.82% of 90+days inactive customers. While the improvement of reactivation customers rate still remain high in Dec25, higher returned customers might be caused by the holiday effect.

In SW region, there is a high portion of Hibernating Customers (~29%) in 2025. However, the number of those customers in July25 reached at the peak and then droped quickly to 0 in Dec25. It might be caused by Weekend promotions as high daily orders difference between weekend and weekday (need further verification)

Key Insights

There were no transaction data for CDR Grape Jelly in 2024 and 2025, need to be clarified with Sales team on any sales plans for this product.

34% of cheese products sold in Nov25 in SW region got no more sales in Dec25, together with increased return rate (0.94%), might reveal those Zero-Selling products could be the starting point to investigate decreased sales trend and increased return rate in SW region in Dec25.

Reactivation Rate, Repeat Purchase Rate and Avg Transactions/Customer by Last 12 Mths

Key Insights

The Nov25 Sales Boost event helped Supermarkets taking back Revenue leading position. Sales increased by 34.14% vs. Oct25, while the rate dropped to 25.82% in Qtr4 vs. Qtr3 2025.

In Dec25, ▼ customer reactivation rate, ▲ repeat purchase rate and higher Average Transactions/Customer might indicate attracted customers in Nov25 made repeat purchases, signalling potential early customer retention.

Assumptions & Notes

Clarify the key information about data source, data manipulation & measures calculation

Data

a. This data is from Maven Market, a multi-national grocery chain with locations in Canada, Mexico and the US.
b. This data represents daily operations of grocery retail business, including customer purchases & returns transactions, customers & products information, stores details and regional hierarchy.
c. There are some information required for more deeper analysis, e.g. new registered customers in the period which fact tables fell into, for Customer Cohort Analysis. So this report analyses on the available data.
d. All dates on calendar, transactions and returns table were all dated in year 1997 and 1998, so added 27yrs on top of those dates to align the dataset with the current reporting period and enable realistic relative-date calculations.
e. All dates on dimension tables - customers (birth_date, acct_opened_date), stores (first_opened_date, last_remodel_date) were too old and become unmeaningful for the analysis, so added 28yrs on top of those dates to match with the calendar and fact tables
f. The financial year period is set to between 1st January and 31st December, so as to have the data covering exactly 2 financial years.

Fact Tables

- *Transactions Data*

a. There're no data of transaction id, so for those transactions made by the same customer at the same store on the same date, treated as 1 transaction and labelled as the same Order ID on transactions table in the format of "C#####S##D########".
b. There're no transactions and returns data for regions of Mexico (central, south, east) and Canada West in 2024, however no stores in those regions were firstly opened or remodeled in 2024 and 2025. So we might need further information to investigate and understand this situation more deeply. It might be caused by technical issues, such as data lost for those regions or they might have some issues on transporting the local data to the system used by head office.
c. There're no transaction data for CDR Grape Jelly in 2024 and 2025, need to clarify with the sales team if there were any plans to sell this product or any issues to restock this product so as to understand if the missing data was caused by business plans or technical issues.

- *Returns Data*

a. There're no data of return id, so for each returns line, treated as each individual returns made on different transactions/orders as there are no related customer id and transaction/order id.
b. As there're no instructions on how did the business deal with returned products, this report treats all returns as returned to stock for resale.
c. As there're no related transaction id on those Returned Items, it's hard to reflect the reaction between actual buys and returns and the potential reasons of and customer behaviour behind the return, e.g. which transaction (which customer id purchased on what date) the return line related to.
d. There're no returns data for Small Grocery, might need further information such as Return Policy to see if there're actually no return requirement by clients or it's caused by No Return Policy.

Dimension Tables

- *Customers Table*

a. Couldn't discover the accurate lifetime value and new customer cohort retention analysis as all customer accounts were created before the transaction data, so the analysis on customers is estimated on the available data.
b. There are no customer id on the returns data, so the calculation on the customers data and related to sales revenue and sold quantity is based on the transactions data.

- *Product Table*

a. There are no product categories data, so extracted the product name from the full name by removing the brand name, and then created a table "Product Categories" which listed 311 distinct product name, and manually assigned a relative subcategory to each product name and a relative main category to each subcategory.
b. Only used Product Retail Price. If trasaction-level pricing is provided, we might be able to have a much more variable and realistic results on revenue-related calculations.

Glossary - Customers & Products

a. *Period* - selected period granularity, could be Quarter/Month/Week
b. *Inactive Customers* - Customers ID with no transactions for 90+days before beginning of the period
c. *Reactivated Customers* - Inactive Customers made at least 1 purchase within the period
d. *Successful Reactivation* - Reactivated Customers made at least 1 purchase within the next 90days after end of the period
e. *Failed Reactivation* - Reactivated Customers with no purchases within the next 90days after end of the period
f. *Dormant Customers* - Customers ID made at least 1 purchase within 90days before beginning of the period but stop buying within the period
g. *Active Customers* - Customer ID made at least 1 purchase within the period
h. *Repeat Purchase* - Customers made at least 1 purchase within the period and at least 1 purchase within 90days before the end of the period
i. Champions - Bought recently, buy often and spend the most
j. Loyal - Spend good money often
k. Potential Loyalist - Recent customers but spent less amount and bought 1+
l. New Customers - Bought most recently but not often
m. Promising - Recent shoppers but haven't spent much
n. Need Attention - Above Average monetary values and recent shopper but not often
o. About To Sleep - Below average recency, frequency and monetary values
p. At Risk -Spent big money or purchased often but long time ago. Need to bring back
q. Cannot Lose Them but losing - Made biggest purchases and might be often, but haven't returned for a long time
r. Hibernating Customers - Last purchase was long back, low spencers and low number of orders
s. Lost Customers - Lowest recency, frequency and monetary scores
t. *Active Products* - Product SKU were in at least 1 order/transaction within the period
u. *Lost-Sales Products* - Products were in at least 1 order/transaction last month but were not in any order/transaction this month
